

Investing in the Future of Data Exchange: NIEMOpen Standardization

For over two decades, the National Information Exchange Model (NIEM) has served as the cornerstone for information sharing across domains and communities of interest. Federal, state, and local agencies, along with international partners, have benefited from its harmonization of 20,000+ data elements and methodologies for developing message specifications based on NIEM naming and design rules.

1

Evolution to NIEMOpen

Now operating under OASIS, NIEMOpen represents a significant milestone in NIEM's evolution, providing access to OASIS's proven methodology for establishing and supporting standards.

2

Enhanced Standardization

NIEMOpen is being established as an OASIS standard, with potential progression to ANSI or ISO certification, significantly increasing its credibility and official standing.

3

Expanded Capabilities

Beyond message exchange standards, NIEMOpen now supports APIs that form the foundation of data structures, vastly improving information sharing within organizations and across partner networks.

Community-Driven Sustainability

As NIEMOpen transitions from federal agency control to a true community project, the responsibility for maintaining and enhancing this vital framework falls to its users and beneficiaries. By distributing the modest costs of operations and technical support across the community, we can ensure NIEMOpen's indefinite sustainability.

Invitation to Sponsorship

We invite you to become a NIEMOpen sponsor to protect your interests and support its continued relevance. Sponsorship benefits include a voting seat on the Project Governing Board, empowering you to shape NIEMOpen's future and ensure it meets your specific needs and objectives. Explore sponsorship options at niemopen.org/join-us.
